Case 1 – Charlie Hebdo

- January 2015 Paris
- Said Kouachi and Chérif Kouachi forced their way into the offices of the French satirical newspaper
- Killed 11 people and injured 11 others
- Chérif was incarcerated between Jan 2005 and Oct 2006 and met his mentor Djamel Benghal; he radicalized in prison
- He also met Amedy Coulibaly, also incarcerated for terrorist acts

Case 2 – Copenhagen Shootings

- February 2015 Copenhagen, Denmark
- Shooting at the event “Art, Blasphemy and Freedom of Expression” following by another shooting at the Great Synagogue
- 3 victims, six police officers wounded
- Suspect: Omar El-Hussein
- Arrested in 2014 and sentenced for 2 years prison (he was released however in 2015)
- It is not yet clear whether he became radicalised in prison like the men behind the Paris attacks. But Michael Gjorup, head of the country’s prison and probation service, told Danish media that authorities had noticed changes in his behaviour in prison and had alerted the intelligence services.

Decision-Making Process on Offender Management

- Large volume of offenders managed by Parole & Probation officers
- Time is limited: need to have quick and complete access to offender information
- Large quantity of data in our system: it becomes cumbersome to get a complete view of the offender's lifecycle in order to make decision-making process accurate and easy

CORIS® Offender Insight

- Our innovation project addresses the needs of various user groups:
  - A housing officer (wishing to understand who is a new offender in his housing unit)
  - The probation officer (working closely with the offender to set case plan for re-entry to integrate in the community)
  - The parole board (making a decision on an offender release)
- Users can see the relationships in time between key events for the offender (i.e. reception, case plan, notes, discipline, transfers)
- Drill down capability allowing items selection on the visual timeline (further details at the fingertips)
- Improve your decision-making process, reducing operational costs

BI – Visitation Dashboard

- Visitation dashboard provides key insights to the interactions happening between the offenders and visitors visiting them.

- It creates visual direct and indirect links between offenders, to identify possible gang activity. At DOC, the Gang and STG (Security Threat Group) conducts preliminary interview with offender during the intake process, to see if the offender needs to be gang affiliated and creates alert to monitor that offender.

- Visitation dashboard helps in near real time monitoring of these connections and complements the details for the gang affiliation process

Visitation Dashboard – Offender

- This dashboard provides the visual connection of offender with other offenders (could be gang members) that were derived by looking at the visitors and their visits with offender. User can select Top N offenders based on below KPIs,
- Strongly connected to Gang - Offenders who has been visited by most visitors who primarily visited gang members, this indicates high probability of offender is being already part of a gang
- Connection with Gang influencing visitors – Offenders who has been visited by most visitors who visited more number of gang members and also visited few non gang members, this indicates the probability offender being influenced by visitor to be part of gang
- With strong gang network - Offenders who has been visited by most visitors who visited gang members, indicates probable gang activity
- Seen by most visitors – Offenders who has been visited by more visitors

Visitation Dashboard - Visitor

- *Visitation Dashboard –Visitor*
- Similar to Offender view, this Visitor view provides the visual network connection of visitors with offenders, indicated by
- Influencing Offenders to be in gang
- Supporting gang
- With strong gang
