Developing the Use of Technical Tools in Cross-Border Resettlement (DUTT)

This project seeks to study the potential usage of specific technical tools, as a means to assist with transnational transfers of offenders. Specifically, it will look at:

- Video-conference technology (VCT)
- Multi-lingual Touch Screen Facilities (TSF)

The project aims to research the two above areas, in relation to the transfer of offenders across EU member states. It will model processes and techniques used between the partner countries to identify potential issues and difficulties. Both technical issues and practice-based issues will be explored. Recommendations for future usage will then be made. Project learning will be disseminated more widely than the project partners, in order to be of use to other states.

Project Outputs include:

- Evaluation report on VCT
- Feasibility desk-research on TSF
- Six study visits, throughout the life of the project
- Multi-agency transnational launch event
- Final multi-agency transnational conference

Project Partners

- London Probation Trust, UK
- National Offender Management Service (NOMS), UK
- CEP – European Organisation for Probation, The Netherlands
- Reclassering Nederland, The Netherlands
- State Probation Service, Latvia
- Custodial Institutions Agency, (CIA) The Netherlands

Timeline

Project Start Date: March 2011

Project End Date: February 2013
