

How in probation services AI might affect the dedicated workforce (size and character) or even the supervision itself?

Might reduce the Numbers of probation professionals

Focus on higher risk clients
Increase clients participation
Reduce admin duties
Increase efficiency of the workforce
Reduce emotional burden on officer
Reduce the costs
Better distribution of work

Might reduce number of officers. Also could have an impact on a quality and on the profiles of the workforce

Probation Officers will have more time to relevant topic with their clients

More quality time with clients

Change in relationship. Better?

Tailor made supervision

Supervision can be more focused on key factors

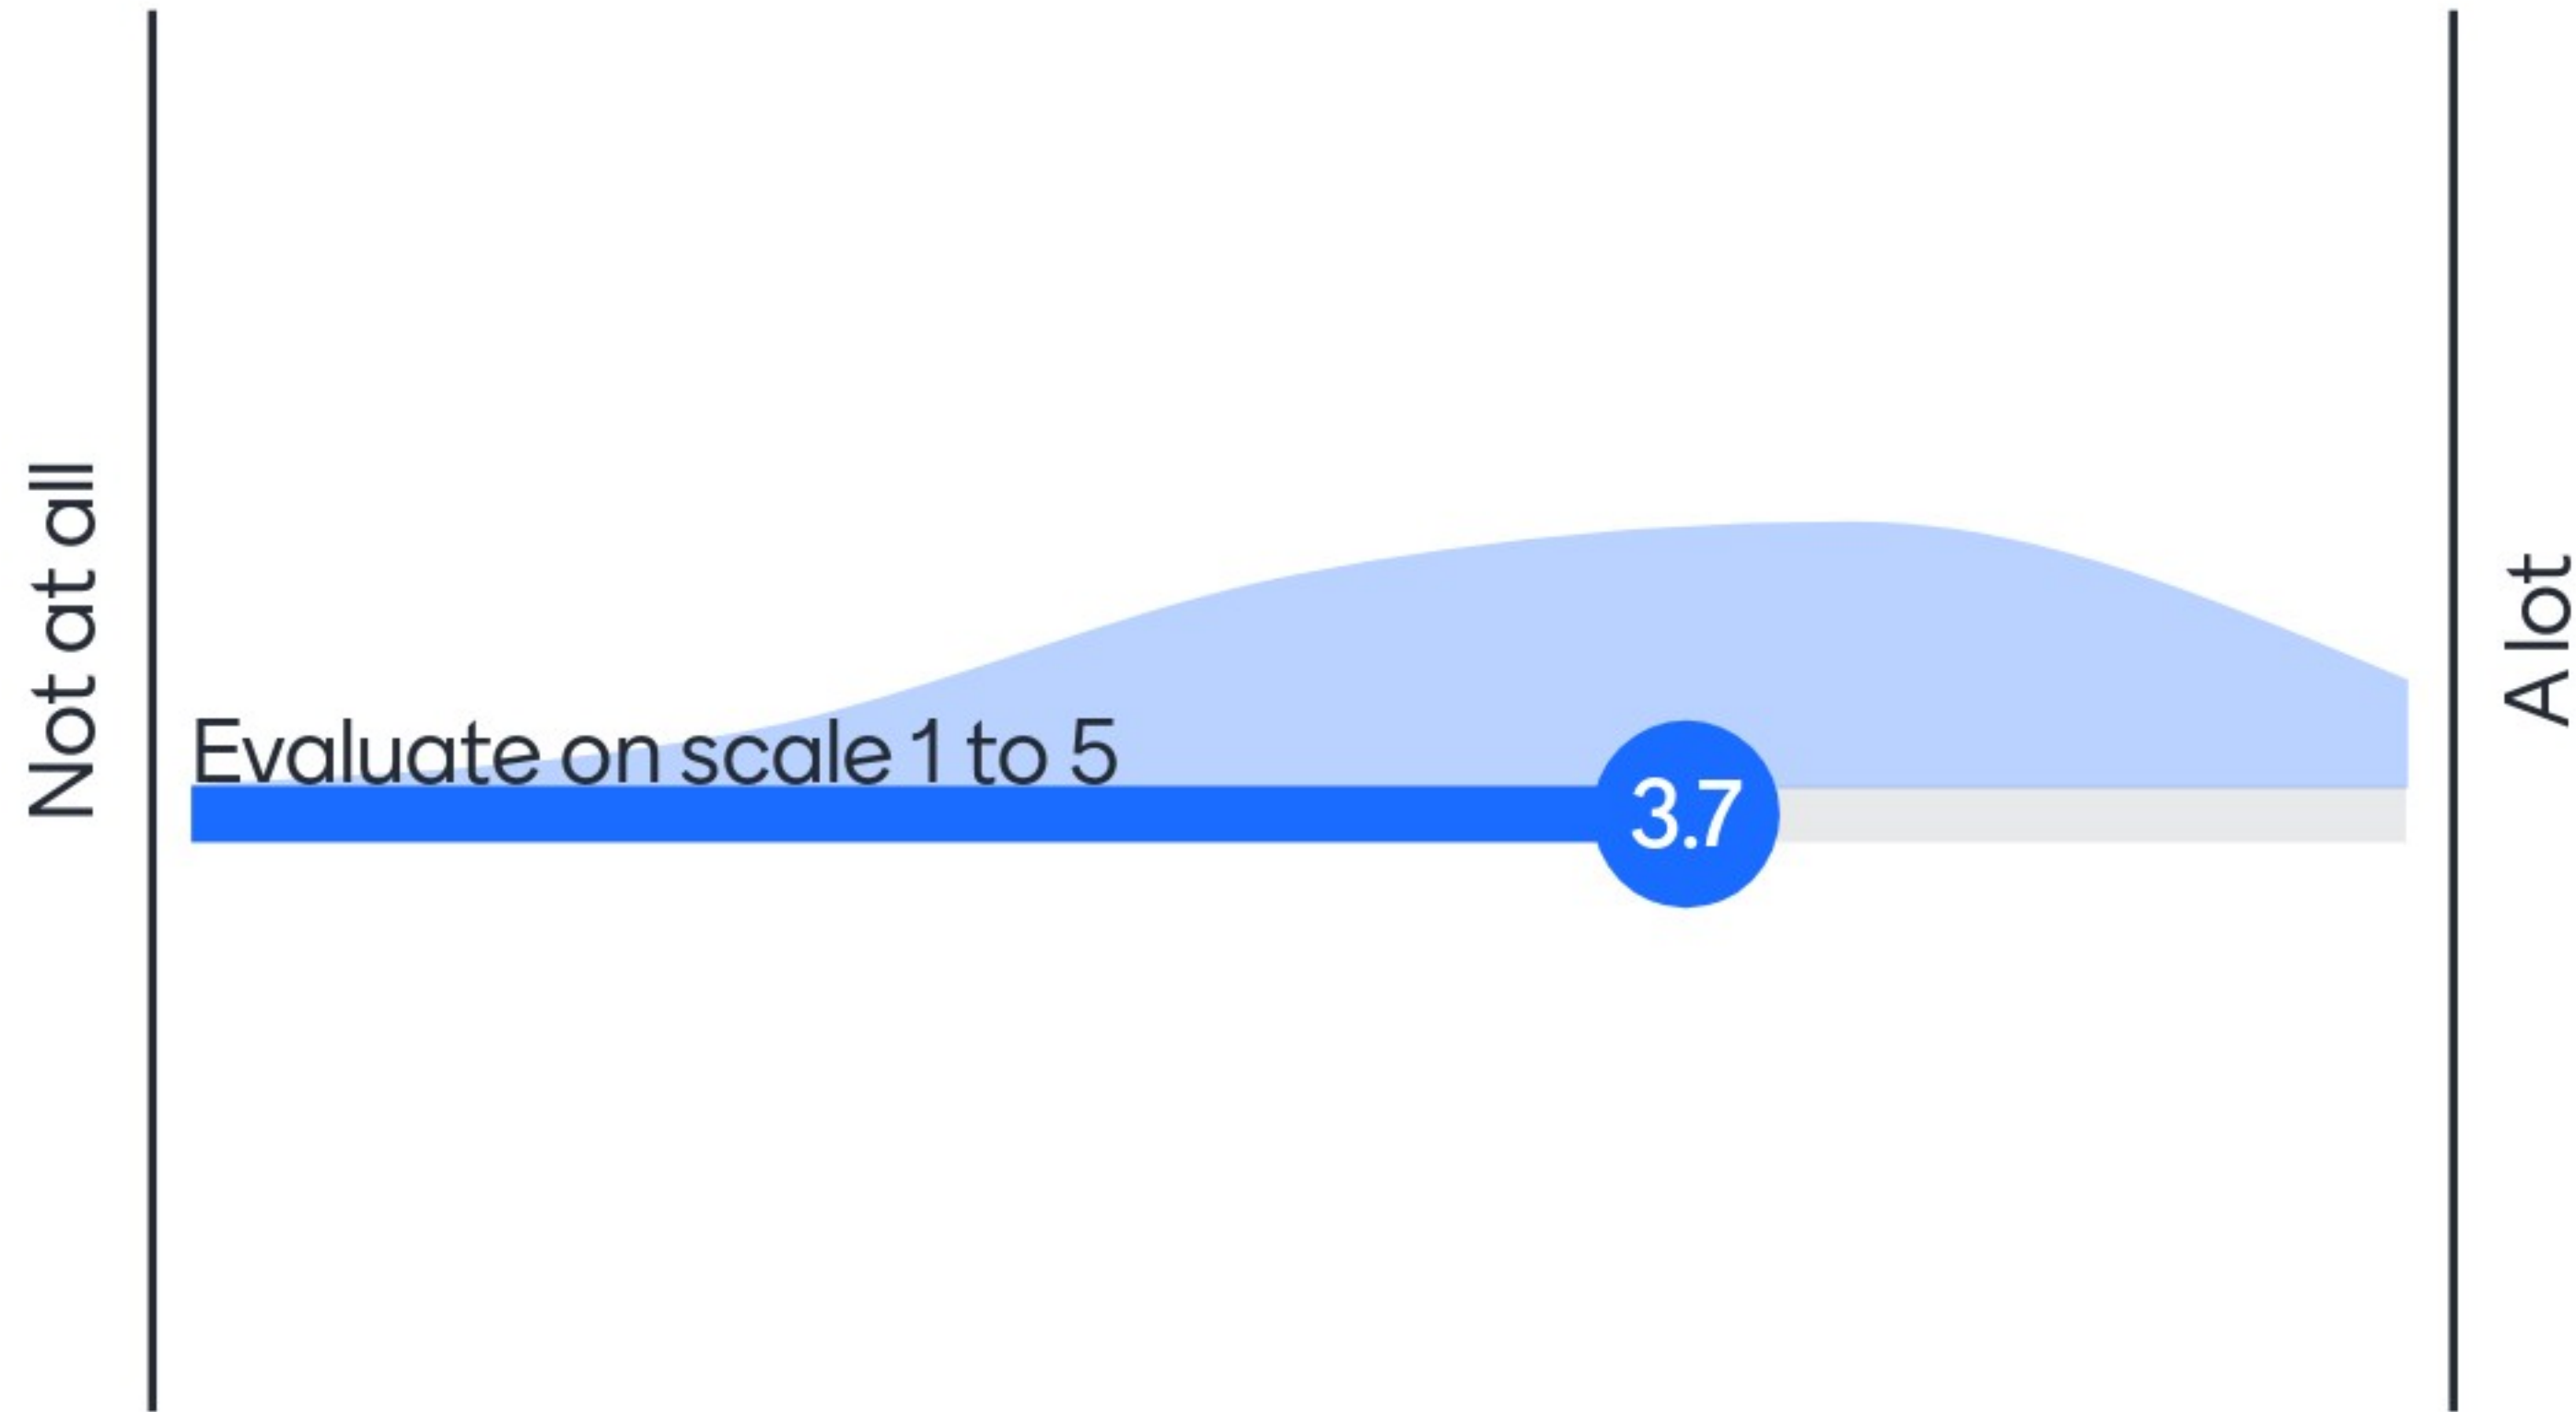

Helpful for simple tasks like giving staff prompts to take action and interventions

How in probation services AI might affect the dedicated workforce (size and character) or even the supervision itself?

Do not believe Numbers will be reduced but nature of work will change. Up skilling will require focus

In countries where there are sufficient number of professional officers then AI may decrease the number of Officers but in countries where workloads are high then it may help with supervising large numbers of probationers

To what extent are electronic monitoring and «probation apps» the precursors of a much more data-driven approach to supervision?

Do you think that an AI technology can be trusted in probation services and provide the expected services while being compatible with human rights?
